Work principle:

This kind of valve are handled by manual. CX FLUID offers three types handle, such as stainless steel multi-position handle, plastic multi-position handle, and pulling handle.

Multi-position handle regulates the valve by 13 seats achieving control of medium flow purpose.

Pulling handle regulates the valve through four multi-function positioning, in its open or close four position, also achieves control of medium flow purpose.

This kind of valve also can be handled by a pneumatic actuator. Pneumatic actuator is to convert the axial movement of piston to be 90 degree rotation of valve shaft, so that the valve can be open or close to achieve the requirement of control and open /close for the pipeline system. They have three type of actuator: normally open (NO), normally closed (NC), air/air(A/A)
